

Agenda

- ① switch case
- ② default
- ③ use of break
- ④ menu driven program
- ⑤ goto

Switch Case

switch (exp)

{

case constant :

case constant :

case constant :

}

- Two or more than two case constants can not be same
- case constants can be integers and characters but not real constant.
- You can write all cases and default in any order
- When break keyword encounters, control moves outside the switch body.
- You cannot write variable in front of case.

→ You cannot write an expression containing variables in front of case.

menu driven program

1. Addition
2. Subtraction
3. Multiplication
4. Division

Enter your choice

Goto
