React.js & CSS3

Backend

Node.js & Express

Database

MongoDB Compass

Modern Landing Page Design

Clean Gmail interface replication with responsive call-to-action buttons for seamless navigation and user login.

01 User Account Creation (Sign Up)

The screenshot displays a web browser window with the address bar showing 'localhost:4000/signup'. The page features a 'Create Account' form with the following fields and elements:

- Full Name:** A text input field with the placeholder 'Enter your full name'.
- Username:** A text input field with the placeholder 'Enter a username'.
- Email Address:** A text input field with the placeholder 'Enter your email'.
- Password:** A text input field with masked characters (dots).
- Sign Up:** A prominent red button.
- View Registered Users:** A link located below the 'Sign Up' button.

The browser's taskbar at the bottom shows the system clock as 20:53 on 27-09-2026, along with weather information (24°C, Partly cloudy) and various application icons.

User Onboarding Workflow

Collects Full Name, Username, Email, and Password with frontend validation. Integrates seamlessly with backend auth routes to register new accounts.

02 Secure Login & Face Verification

Advanced Authentication Features

Includes standard credentials login alongside an integrated Face ID Verification step to ensure high-grade user authentication safety.

03 Interactive Email Dashboard UI

Fully Functional Inbox Interface

Categorized tabs (Primary, Social, Promotions), active session countdown timer, left navigation drawer, and dynamic mail lists.

04 Session Logout & State Handling

Secure Session Termination

Provides explicit feedback when user sessions expire or when a user logs out, redirecting smoothly back to authentication routes.

05 Database Management (MongoDB)

Real-time Data Persistence

Stores registered user credentials, profiles, and timestamps in MongoDB collections with robust Schema management via Mongoose.
